

# ***Anti-Hijack Door Locking System***

## **IGNITION CONTROL CENTRAL LOCKING SAFETY SYSTEM**

### ***SLD-206DL*** **Auto Locking Module**

This Anti-Hijack system can be installed to any vehicle with the following types central locking:

- ◆ Negative Switching
- ◆ Positive Switching
- ◆ Vacuum Pump
- ◆ Reverse Polarity

For non true central locking systems where the vehicles central locking only operates from the drivers door an extra door motor will need to be installed. Central locking kits (SLD-200) are available to upgrade vehicles without central locking.

The **SLD-206DL** can be used so that when a cars ignition is turned **on** the car doors will automatically lock (if they are closed), and when the ignition is turned **off** the doors will unlock.

An Anti-Hijack feature is now becoming increasingly requested to protect the occupants of the vehicle. With car security systems getting more sophisticated, thieves are starting to attack the weakest link in the system - the driver.

Car jackings in the street, car parks, at traffic lights and in petrol stations are on the increase.

### ***SLD-200*** **Upgrade Kit**
